Our average client saves 26% annually

Maintain or Improve Comfort

Work orders and comfort complaints decrease
with our program

We work within your approved program guidelines

Create a Culture of Conservation

Model sustainability and stewardship to students
and stakeholders

How We Achieve Savings for Our Clients:

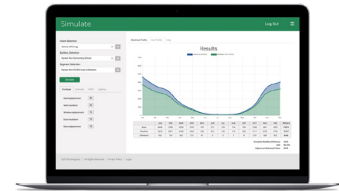

Sustainability as a Service for Sustainable Budget and Sustainable Energy

The Ceres Software Platform

Easy to use, cloud-based applications powered by machine learning and advanced energy analytics to optimize your sustainability program.

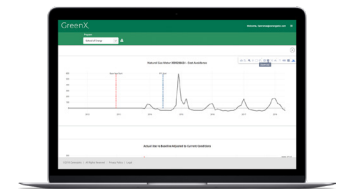

Simulate™

Simulates the energy consumption of your building and calculates the dollar impact of efficiency projects such as HVAC or lighting.

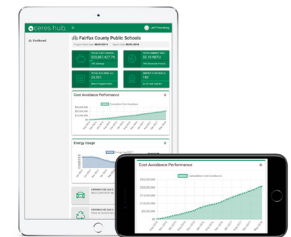

GreenX™

Analyzes your monthly, interval and EMS data. Over time with machine learning, it understands how utility usage should be optimized to find cost savings, and also detects anomalies and issues real-time alerts.

Ceres Hub™

Client-accessible dashboards offer complete visibility into your sustainability program anytime, anywhere. Share your savings for water, natural gas and electricity in real-time with your board, facilities team and administrators.

Embedded Energy Specialist

Dedicated energy specialists add capacity to your facilities team to implement sustainability strategies identified by our Ceres applications and engineers from our Center of Excellence.

Partnering for Success in Sustainability

We combine our experts and cloud-based applications with your unique knowledge of the systems and equipment within your buildings across your district. Our program works as a partnership that optimizes your facilities, eliminates energy waste and empowers your operations team to reclaim budget otherwise spent on the utility bill.
